ELSEVIER

Comput. Methods Appl. Mech. Engrg. 137 (1996) 429–432

Computer methods in applied mechanics and engineering

Subject Index of Volume 137

Boundary element methods

Recent advances in the alternating method for elastic and inelastic fracture analyses, L. Wang and S.N. Atluri 1– 57

Performance of quarter-point boundary elements in analysing thermally stressed kinked and curved cracks, D.E. Katsareas and N.K. Anifantis 153–165

Solution of 3D-Laplace and Helmholtz equations in exterior domains using *hp*-infinite elements, K. Gerdes and L. Demkowicz 239–273

Boundary layers

A semi-implicit method for internal boundary layers in compressible flows, C.D. Pruett 379–393

Control theory

On the motion of a disc rolling on a horizontal plane: Path controllability and feedback control, G.W. Ehlers, Y. Yavin and C. Frangos 345–356

Dynamics

Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188

Adaptive meshing for dynamic strain localization, A. Deb, J.H. Prevost and B. Loret 285–306

Automated band identification procedure for dynamic strain localization, A. Deb, B. Loret and J.H. Prevost 307–330

On the motion of a disc rolling on a horizontal plane: Path controllability and feedback control, G.W. Ehlers, Y. Yavin and C. Frangos 345–356

Elasticity

Recent advances in the alternating method for elastic and inelastic fracture analyses, L. Wang and S.N. Atluri 1– 57

Finite volume multigrid solver for thermo-elastic stress analysis in anisotropic materials, J. Fainberg and H.-J. Leister 167–174

Solution of 3D-Laplace and Helmholtz equations in exterior domains using *hp*-infinite elements, K. Gerdes and L. Demkowicz 239–273

Finite difference methods

Finite-difference methods for computing the turning point of ignition in a tubular reactor operated adiabatically, U.S. Herges and E.H. Twizell 95–109

Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188

Linearized Θ-methods. Part II: Reaction–diffusion equations, C.M. García-López and J.I. Ramos 357–378

Finite element and matrix methods
Recent advances in the alternating method for elastic and inelastic fracture analyses, L. Wang and S.N. Atluri 1– 57
A div–curl–grad formulation for compressible buoyant flows solved by the least-squares finite element method, S.-T. Yu, B.-N. Jiang, J. Wu and N.-S. Liu 59– 88
The optimal symmetrical points for polynomial interpolation of real functions in the tetrahedron, Q. Chen and I. Babuška 89– 94
A general method for recovering equilibrating element tractions, P. Ladevèze and E.A.W. Maunder 111–151
Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188
A consistent approach to continuum and discrete rate elastoplastic structural problems, F. Marotti de Sciarra 207–238
Adaptive meshing for dynamic strain localization, A. Deb, J.H. Prevost and B. Loret 285–306
Automated band identification procedure for dynamic strain localization, A. Deb, B. Loret and J.H. Prevost 307–330
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409

Fluid mechanics
A div–curl–grad formulation for compressible buoyant flows solved by the least-squares finite element method, S.-T. Yu, B.-N. Jiang, J. Wu and N.-S. Liu 59– 88
A Karhunen–Loève based Galerkin approximation to Boussinesq equation, I.H. Tarman 275–284

Fracture mechanics
Recent advances in the alternating method for elastic and inelastic fracture analyses, L. Wang and S.N. Atluri 1– 57
Performance of quarter-point boundary elements in analysing thermally stressed kinked and curved cracks, D.E. Katsareas and N.K. Anifantis 153–165

General Rayleigh–Ritz and Galerkin techniques
A Karhunen–Loève based Galerkin approximation to Boussinesq equation, I.H. Tarman 275–284

Heat and diffusion
Linearized Θ-methods. Part II: Reaction–diffusion equations, C.M. García-López and J.I. Ramos 357–378

Incompressible and near incompressible media
Sensitivity of forming processes to shape parametes, H.J. Antúnez and M. Kleiber 189–206

Nonlinear dynamics of systems
Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188
On the motion of a disc rolling on a horizontal plane: Path controllability and feedback control, G.W. Ehlers, Y. Yavin and C. Frangos 345–356

Nonlinear mechanics
Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188
A consistent approach to continuum and discrete rate elastoplastic structural problems, F. Marotti de Sciarra 207–238

Adaptive meshing for dynamic strain localization, A. Deb, J.H. Prevost and B. Loret 285–306
Automated band identification procedure for dynamic strain localization, A. Deb, B. Loret and J.H. Prevost 307–330
Transfer operators for evolving meshes in small strain elasto-plasticity, D. Perić, Ch. Hochard, M. Dutko and D.R.J. Owen 331–344
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409

Numerical solution procedures
Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188
A consistent approach to continuum and discrete rate elastoplastic structural problems, F. Marotti de Sciarra 207–238
Transfer operators for evolving meshes in small strain elasto-plasticity, D. Perić, Ch. Hochard, M. Dutko and D.R.J. Owen 331–344
On the motion of a disc rolling on a horizontal plane: Path controllability and feedback control, G.W. Ehlers, Y. Yavin and C. Frangos 345–356

Optimization
The optimal symmetrical points for polynomial interpolation of real functions in the tetrahedron, Q. Chen and I. Babuška 89– 94
Sensitivity of forming processes to shape parametes, H.J. Antúnez and M. Kleiber 189–206
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409
A parametric model of a 2-stroke engine for design and analysis, C.W. Dekanski, M.I.G. Bloor and M.J. Wilson 411–425

Optimization and design of structures
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409

Plasticity
A consistent approach to continuum and discrete rate elastoplastic structural problems, F. Marotti de Sciarra 207–238
Adaptive meshing for dynamic strain localization, A. Deb, J.H. Prevost and B. Loret 285–306
Automated band identification procedure for dynamic strain localization, A. Deb, B. Loret and J.H. Prevost 307–330
Transfer operators for evolving meshes in small strain elasto-plasticity, D. Perić, Ch. Hochard, M. Dutko and D.R.J. Owen 331–344
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409

Solution of differential equations
Linearized Θ-methods. Part II: Reaction–diffusion equations, C.M. García-López and J.I. Ramos 357–378

Solutions of ordinary and partial differential equations
Finite-difference methods for computing the turning point of ignition in a tubular reactor operated adiabatically, U.S. Herges and E.H. Twizell 95–109
Finite volume multigrid solver for thermo-elastic stress analysis in anisotropic materials, J. Fainberg and H.-J. Leister 167–174
Linearized Θ-methods. Part II: Reaction–diffusion equations, C.M. García-López and J.I. Ramos 357–378

Structural mechanics
A general method for recovering equilibrating element tractions, P. Ladevèze and E.A.W. Maunder 111–151
Explicit time integration algorithms for structural dynamics with optimal numerical dissipation, G.M. Hulbert and J. Chung 175–188
A consistent approach to continuum and discrete rate elastoplastic structural problems, F. Marotti de Sciarra 207–238
Sensitivity analysis in plane stress electro-plasticity and elasto-viscoplasticity, M. Kleiber and P. Kowalczyk 395–409

Systems of linear and nonlinear simultaneous equations
Finite volume multigrid solver for thermo-elastic stress analysis in anisotropic materials, J. Fainberg and H.-J. Leister 167–174

Thermal effects and thermodynamics
Performance of quarter-point boundary elements in analysing thermally stressed kinked and curved cracks, D.E. Katsareas and N.K. Anifantis 153–165

Transonic flow
A semi-implicit method for internal boundary layers in compressible flows, C.D. Pruett 379–393

Turbulence
A Karhunen–Loève based Galerkin approximation to Boussinesq equation, I.H. Tarman 275–284
A semi-implicit method for internal boundary layers in compressible flows, C.D. Pruett 379–393

Viscoelastic and viscoplastic media
Sensitivity of forming processes to shape parametes, H.J. Antúnez and M. Kleiber 189–206
Adaptive meshing for dynamic strain localization, A. Deb, J.H. Prevost and B. Loret 285–306
Automated band identification procedure for dynamic strain localization, A. Deb, B. Loret and J.H. Prevost 307–330
